BlockBot Wallet

SETUP & GO GUIDE

BlockBot Wallet: Setup & Go Guide

Move your funds using the new BlockBot interface: step by step, with every official link you need

- Rotate your keys: a NEW wallet, a NEW recovery phrase
- MetaMask, step by step
- Every official link

Never reuse an old recovery phrase. "Add account" in an old MetaMask is NOT a new wallet. Nobody will ever ask for your phrase.

Edition: November 2026 · v3

Official site: https://blockbot.com

Quick FAQ 22

Every web address in this guide is a clickable link. Click any section above to jump to it.

BEFORE YOU START

Read this first

1. **Create a BRAND-NEW wallet with a BRAND-NEW recovery phrase.**

2. **NEVER import or reuse an OLD recovery phrase (seed phrase).**
   Not the one from your rewards app, and not one from any brand rewards wallet you had before. Old wallets may be exposed. If you reuse one, someone else may be able to take your funds.

3. **Your new recovery phrase goes on PAPER, kept in a safe place.**
   No photos, screenshots, typing, cloud notes, email or texts.

4. **Nobody from BlockBot, MetaMask, Trust Wallet, Rabby or any "support" will EVER ask for your recovery phrase.**
   Anyone who asks is a scammer.

5. **Already have MetaMask with your old wallets in it? "Add account" is NOT a new wallet.**
   That includes a MetaMask you may have used to vote on the DGF. Every account you add inside it comes from the SAME old recovery phrase. Use a fresh MetaMask in a **new browser profile** or a **different browser** (Part 0).

6. **Only use `https://blockbot.com`.**
   Type it yourself or use a bookmark.

HOW IT WORKS

0
A clean place
New Chrome profile or a different browser

1
A NEW wallet
MetaMask with a brand-new phrase on paper

2
Move your funds
Log in, unlock, connect, hold to send

3
Use it
See, receive and send on blockbot.com

What BlockBot Wallet does

A best practice in crypto is to **regularly rotate your keys and change your passwords** to keep your assets secure. BlockBot Wallet (https://blockbot.com) helps you do exactly that: it moves your **digital rewards, tokens and NFTs** out of your old non-custodial rewards-app wallets (Connect, Grow, Give, Elevate, Win, Element, Galvan, Green, Switch, Liberty, Codex, Revo, AdventureWurld, Nerd, RLink…) into a **new non-custodial wallet** with a new recovery phrase. Afterwards, blockbot.com lets you manage all of your assets in one place, with the correct amounts, and send and receive.

Your passcode and keys stay in your browser tab. They are never sent to BlockBot or saved, and they're wiped when you lock, close the tab, after 30 minutes idle, or after 8 hours.

What you need

- [ ] A computer with a **web browser like Google Chrome**. A different browser may work just as well (see "A clean place for your new wallet" below).
- [ ] A **pen** and **two sheets of paper**: Sheet 1 for your new recovery phrase, Sheet 2 for your passwords
- [ ] The **email** you use to log in to your brand apps
- [ ] Your rewards-app **wallet passcode(s)** (brands can have different ones), or your **old** recovery phrase if you forgot one
- [ ] A quiet spot, alone, where no one can see your screen (about 20 minutes)

SHEET 1

Your NEW recovery phrase

1. _____	2. _____	3. _____
4. _____	5. _____	6. _____
7. _____	8. _____	9. _____
10. _____	11. _____	12. _____

All words are lowercase. Write it on your own sheet of paper, not on this guide. Never type it into any website. Keep it somewhere safe, like a fireproof box.

SHEET 2

Your passwords

MetaMask password

Opens MetaMask in this new browser profile

BlockBot password

Logs you in to blockbot.com. 12+ characters, 20+ is better. MUST be different from MetaMask

Rewards-app wallet passcode(s)

Unlock your OLD wallets. Brands can have different passcodes

Use a different password for each one.

PART 0

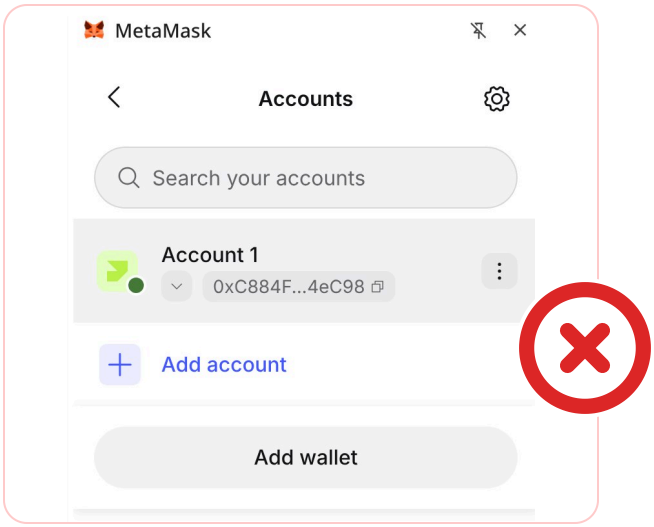
A clean place for your new wallet

Don't skip this

CRITICAL

"Add account" in your existing MetaMask is NOT a new wallet

If you already have MetaMask with an old brand wallet seed phrase linked to it (for example, one you may have used to vote on the DGF), clicking **Add account** (or "Create account") just makes another address from the **same old recovery phrase**. Anyone who has that old phrase can open the "new" account too. Moving funds there doesn't protect them. **Reset account** in MetaMask's settings doesn't help either. It only clears transaction history and keeps the same phrase.



Inside an old MetaMask, **Add account** makes another address from the SAME old phrase. Don't use it to escape an exposed wallet.

Already have a Google Chrome profile linked to an existing MetaMask wallet? Then set up a **new profile** and a **new MetaMask wallet** in it. Pick ONE of these options. Both give you a fresh MetaMask that has never seen your old phrase.

OPTION A RECOMMENDED, SHOWN IN THE VIDEO

A new Chrome profile.
It's a separate, empty copy of Chrome on the same computer, and your old MetaMask stays untouched in your normal profile.

1 In Chrome, click your **profile picture** (top right, next to the ⋮ menu).

2 Click **Add Chrome profile** (older versions say **Add**).

3 Click **Continue without an account**. There's no need to sign in to Google.

4 Name it (for example **BlockBot Wallet**), pick a colour, and click **Done**. A new Chrome window opens with no extensions.

5 Do Part 1 **in this new window**. To come back later, click the profile picture and choose **BlockBot Wallet**. Help: **Chrome: Use multiple profiles** https://support.google.com/chrome/answer/2364824

OPTION B MAY WORK JUST AS WELL

A different browser

that has never had MetaMask in it. Install MetaMask there from its official store:

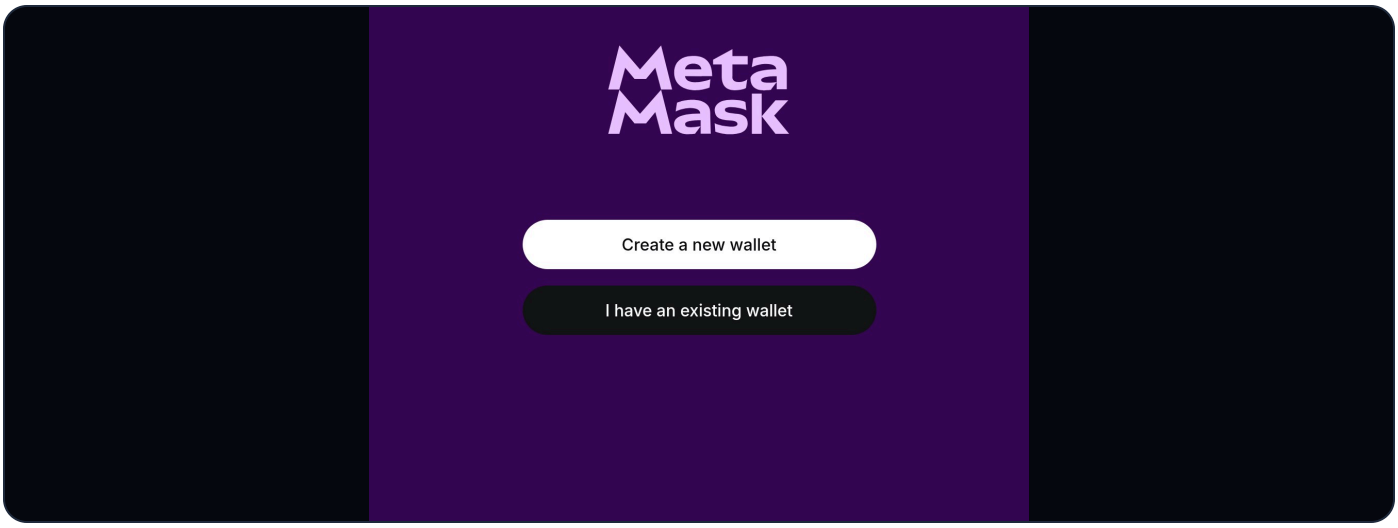
BROWSER	OFFICIAL METAMASK EXTENSION
Brave (uses the Chrome Web Store)	https://chromewebstore.google.com/detail/metamask/nkbihfbeogaeaoehlefnkodbefgpgknn Brave download: https://brave.com/download/
Microsoft Edge	https://microsoftedge.microsoft.com/addons/detail/metamask/ejbalbakoplchlghecdalmeeeajnimhm **Edge profiles help** https://support.microsoft.com/microsoft-edge/sign-in-and-create-multiple-profiles-in-microsoft-edge-df94e622-2061-49ae-ad1d-6f0e43ce6435
Firefox	https://addons.mozilla.org/en-US/firefox/addon/ether-metamask/ **Firefox profiles help** https://support.mozilla.org/kb/profile-manager-create-remove-switch-firefox-profiles
Opera	https://addons.opera.com/en/extensions/details/metamask-10/
Any browser: start from	https://metamask.io/download/

Brave's built-in "Brave Wallet" is a different wallet. Install the MetaMask extension as shown above.

PART 1

Create your new wallet (MetaMask, recommended)

Why MetaMask? It's first on BlockBot's recommended list, it runs in the same browser as blockbot.com, and one MetaMask wallet gives you **both** an Ethereum-style address (0x...) **and** a Bitcoin address (bc1q...).



MetaMask's first screen: choose **Create a new wallet**. Never "I have an existing wallet".

1. **Install from the official source only.** Type **metamask.io** in Chrome and click **Get MetaMask**, or go straight to the official Chrome Web Store listing (link below). Click **Add to Chrome** → **Add extension**. *Fake MetaMask apps exist, so never install from ads or links in emails or texts.*
2. **Pin it:** click the puzzle icon (top right) → pin next to MetaMask.
3. MetaMask opens. Click **Create a new wallet**. *Never "I have an existing wallet".*
4. Click **Use Secret Recovery Phrase**. This is the phrase you'll write down on Sheet 1.
5. **MetaMask password:** make up a new password (8+ characters) that you don't use anywhere else, and type it twice. It only opens MetaMask in this new browser profile. **Write it on Sheet 2 (passwords).** Tick **"If I lose this password, MetaMask can't reset it."** → **Create password**.
6. **Unlock with Biometrics:** click **Maybe later** (you can set it up afterwards).

7 **Save your Secret Recovery Phrase:** make sure no one is watching, and have your pen and Sheet 1 ready → **Tap to reveal** → write all **12 words in order, numbered 1–12**. Check every word twice. *Don't click "Remind me later".* → **Continue**.

- **All the words are lowercase.** Write them in small letters. If you ever type the phrase on a phone, it may auto-capitalize the first letter, and then the phrase won't work.

8 **Confirm your Secret Recovery Phrase:** MetaMask quizzes you to check you wrote it down properly. Tap the missing words in the right order, reading from your paper → **Perfect** → **Got it**.

9 **Help improve MetaMask:** choose your preference → **Continue**.

10 **Your wallet is ready!** → **Open wallet**.

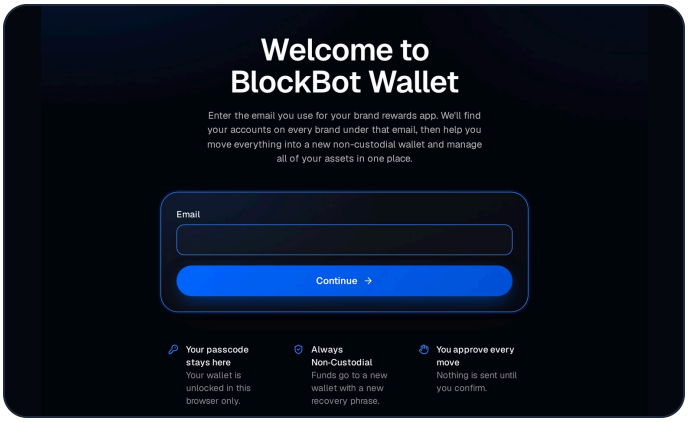
11 Put your recovery-phrase paper somewhere safe, like a **fireproof box**, never next to the computer. A second copy in another safe place is a good idea.

TIP

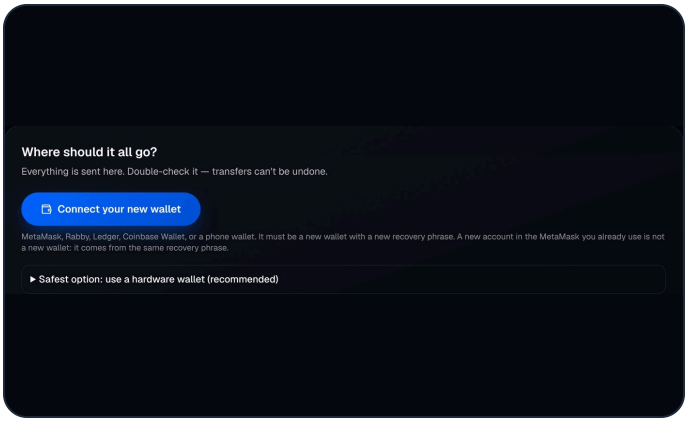
Safest option: a hardware wallet. For large amounts, consider a Trezor or Ledger after your transfer. See "Extra protection: a hardware wallet" after Part 3.

PART 2

Move your funds with BlockBot



The real site: **blockbot.com**, "Welcome to BlockBot Wallet". Type it yourself or use a bookmark.



Under **Where should it all go?**: connect a NEW wallet. A new account in the MetaMask you already use is not a new wallet.

1 In Chrome, type `https://blockbot.com` yourself and bookmark it ☆, so you always come back to the real site. You'll see **"Welcome to BlockBot Wallet"** and three promises: **Your passcode stays here** (your wallet is unlocked in this browser only), **Always Non-Custodial** (funds go to a new wallet with a new recovery phrase) and **You approve every move** (nothing is sent until you confirm).

2 **Email:** type the email you use for your brand rewards app → **Continue**.

- **First time:** click **Email me a login link**. Open the email from **no_reply@blockbot.com** *on the same computer*. The link works once, for 30 minutes, and only the newest link works. Check spam/junk.
- **Next time:** type your **BlockBot password** → **Log in**. Forgot it? Click **Email me a login link**.
- Password boxes have an **eye button** on the right: click it to show what you typed and check it, then click it again to hide it. Only do this when no one can see your screen.

3 **Set your BlockBot password** (first time): at least **12 characters; 20+ is better**. Several words in a row works well, mixing capitals, lowercase, numbers and symbols. It **MUST be different from your MetaMask password**. Write it on Sheet 2 → type it twice → **Set password and continue**.

4 **Your accounts:** check that each rewards account shows **Linked** ✓. Used another email somewhere? Click **Add accounts under another email** and open that link in this same browser → **Add this email**. Then click **Continue**.

5 **Unlock your wallets:** type your rewards-app **wallet passcode** (the one you use to send rewards) → **Unlock**. It never leaves your computer. If it says the passcode didn't work, check it and try again. **Different brands can have different passcodes; each passcode unlocks its own wallet.** Keep going until every wallet says **Unlocked**.

- Forgot it? Click **Use your recovery phrase** and type the **OLD** phrase from your rewards app → **Add this phrase**. ⊗ *Never type your NEW MetaMask phrase here or on any website.*
- If it says **Reload**, click it. That's a safety feature.

6 Click **Find my assets**. Every network is checked (usually under a minute).

7 **Review:** see everything found. Under **Where should it all go?**:

a Click **Connect your new wallet**. Under the button BlockBot reminds you: *"A new account in the MetaMask you already use is not a new wallet: it comes from the same recovery phrase."* Then choose **MetaMask** → in the MetaMask pop-up, check it says **blockbot.com** → **Connect**. *(This shares your address only. It can't move funds.)*

b Click **Confirm this wallet** → MetaMask shows a **Signature request** from blockbot.com whose message starts **"BlockBot Wallet: confirm your new wallet"** → **Confirm**. It's free and moves nothing. You'll see **"✓ Confirmed. Your funds will go to this wallet."** (For a moment it may say *Checking this wallet…* first.)

c **If you have Bitcoin:** in MetaMask click **Receive**, find **Bitcoin (Native SegWit)**, copy the address (starts with **bc1q**), paste it into **Your Bitcoin address**, type its **last 6 characters** by reading them from MetaMask → **Confirm Bitcoin address**.

d ⚠ If BlockBot says **"This is not a new wallet"** (an account of your old recovery phrase), *"This wallet has been used before"*, or *"This wallet uses your old recovery phrase, which may be exposed"*: **stop**, and create a new wallet (Parts 0 and 1).

> **GOOD TO KNOW**
>
> **What BlockBot checks, and what it can't:** BlockBot refuses the old wallet addresses your rewards brands have on record, the old wallets it just scanned (Bitcoin too), and the first 100 accounts of any old phrase you unlocked in this visit (so "Add account" in an old MetaMask is caught). It also refuses a wallet that **has been used before**. It **can't** spot accounts from an old phrase you didn't unlock here, or every other old wallet. **Don't rely on the check. Always use a brand-new wallet** (Parts 0 and 1).

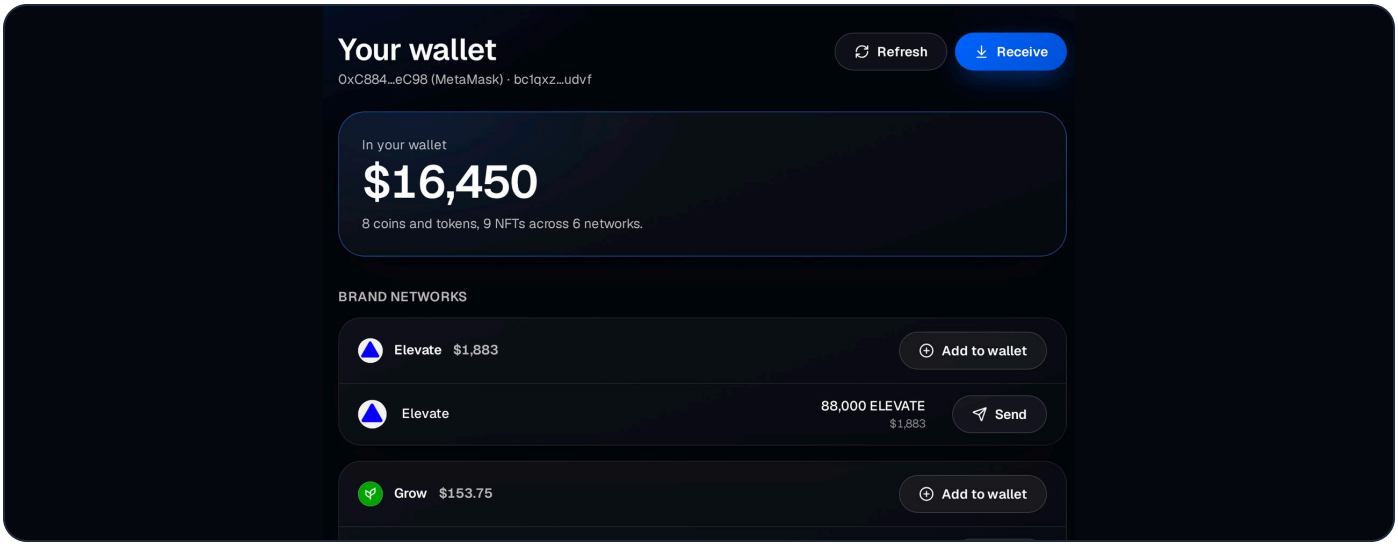
8 Need to change something first? The ← **Back** link at the top of the Review page takes you back to *Find assets*, where you can **Check again**, add another account or recovery phrase, or **Continue to review**.

9 Click **Review & send**. Check the totals and compare the **first and last characters** of "Everything goes to" with your MetaMask address. → **press and hold "Hold to send"**. *Transfers can't be undone.*

10 Keep the page open while each item turns **Sent** ✓. If one says *Didn't send*, click **Retry it**. Then click **Receipt** (saves a CSV record) and **Lock & finish**.

PART 3

Using your new wallet



Your wallet on blockbot.com: **Brand networks** first, with the correct amounts, even when MetaMask shows tiny numbers.

- Log in at **blockbot.com** → **Your wallet** to see everything with the **correct amounts**, in two groups: **Brand networks** and **Ethereum, BNB Chain and Bitcoin**. Transfers can take a few minutes to appear.
- **Don't panic if MetaMask shows some native brand digital rewards as a tiny number.** Those tokens use **8 decimals instead of 18**, and MetaMask can't display them correctly. **Your coins are safe.** The amounts on BlockBot's wallet page are the right ones, and you can verify them on **each brand's block explorer** (links in the BlockBot table below). Before you confirm a send, BlockBot tells you exactly what MetaMask will display.
- **Add to wallet** adds a brand network to MetaMask. Approve it in the pop-up.
- **Receive** shows your addresses and QR codes. Your 0x... address is the same on every listed network.
- **Send:** pick the asset → recipient → amount (or **Max**) → check → confirm in MetaMask. Send a **small test amount first**. BlockBot refuses to send to your old wallets, or to any brand's old wallet. Never send funds

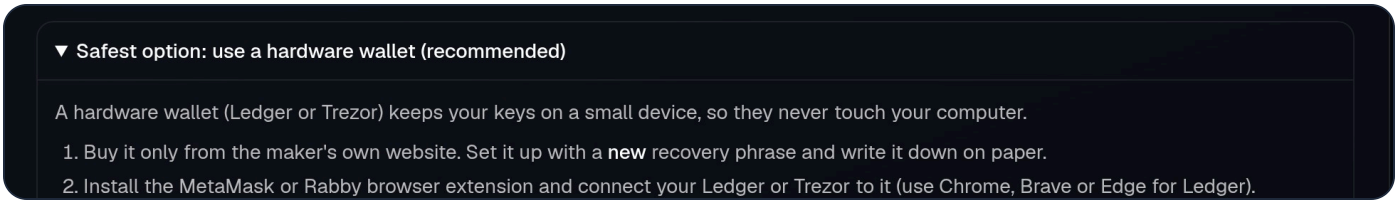
back there.

- Bitcoin in MetaMask: send it from inside MetaMask. (BlockBot's page sends Bitcoin only from Xverse, Leather, UniSat or OKX.)
- Soulbound NFTs show **"Cannot be moved (soulbound)"**. They stay where they were issued.
- **Next time:** just type your email, then your BlockBot password → **Log in**.
- **Remember:** "Add account" in MetaMask never makes a new recovery phrase. Every account in that list shares one phrase. That's fine in your new wallet, but never in an old one.

Extra protection: a hardware wallet (cold storage)

The most secure way to hold large amounts is a **cold storage hardware wallet** like a **Trezor** or **Ledger**. It keeps your keys on a small device, offline, so they never touch your computer.

- Many people keep **most of their holdings** on a hardware wallet, and only the assets they're **actively using or trading** in a wallet like MetaMask.
- After you've moved your assets to MetaMask (or whichever wallet you chose), **consider a hardware wallet** for even more protection.



BlockBot shows the same advice under **Where should it all go?**: the safest option is a hardware wallet with a **new** recovery phrase.

1. **Buy only from the maker's own website**: https://trezor.io/ or https://shop.ledger.com/. Never second-hand or from marketplaces.
2. **Set it up with a NEW recovery phrase** shown on the device. Write it on paper and keep it in a safe place, like a fireproof box. Never reuse an old phrase.
3. **Connect it to MetaMask or Rabby** (Chrome, Brave or Edge) and check every address on the device screen.
4. Send a small test amount to it first, then move the rest.

Official setup pages: https://trezor.io/start and https://www.ledger.com/start (full list in "Hardware wallets" below).

Security checklist

- [ ] NEW wallet + NEW recovery phrase. Never import an old one.
- [ ] "Add account" in an old MetaMask = SAME old phrase. Use a new browser profile or a different browser.
- [ ] The 12 words are written in lowercase, in order, on paper.
- [ ] Phrase on paper, kept in a safe place (like a fireproof box). Never digital.
- [ ] MetaMask and BlockBot passwords are different (BlockBot 12+ characters, 20+ is better) and written on Sheet 2.
- [ ] Download wallets only from the official links below. Check the publisher in the app store.
- [ ] Type **blockbot.com** yourself or use a bookmark. Ignore links in texts, DMs and ads.
- [ ] Read every wallet pop-up: the **site name** (blockbot.com), what it's asking, and the **address**.
- [ ] A "Signature request" to confirm your wallet is free. Anything asking to "approve spending", "set approval for all" or send funds to an address you didn't choose: **reject it**.
- [ ] Compare addresses by their first and last characters. Never copy an address from your transaction history (scammers plant look-alikes).
- [ ] Small test amount first. Transfers are final.
- [ ] Lock MetaMask and click **Lock & finish** on BlockBot when you're done.
- [ ] Consider a hardware wallet (Trezor or Ledger) for more protection.

Red flags: anyone asking for your phrase, "support" who contacts you first, remote-access requests, "urgent" messages, "validate/sync your wallet" sites.

Quick FAQ

Which password is which?

- **BlockBot password**: logs you in to blockbot.com (12+ characters, 20+ is better; different from MetaMask).
- **Wallet passcode(s)**: from your rewards apps (brands can differ). They open your OLD wallets, and only in your browser.
- **MetaMask password**: opens MetaMask in this browser profile.
- **New recovery phrase**: the 12 words that ARE your new wallet. Paper only. Never typed into any website.

Is "Confirm this wallet" safe? Does it cost anything?

It's a free signature that proves the wallet is yours. It moves nothing. Check that it's from blockbot.com and starts "BlockBot Wallet: confirm your new wallet".

MetaMask shows a tiny balance. Did I lose rewards?

No. Some brand tokens use 8 decimals instead of 18, and MetaMask can't display them correctly. Check blockbot.com → Your wallet, or the brand's block explorer.

Something "stays behind". Why?

BlockBot explains each one in plain words (for example, no coin to pay the network fee, a soulbound item, or a network that couldn't be reached). Click **Check again** later, or get help at `https://blockbot.com`.

"You've been logged out"?

Sessions end after 30 minutes of no activity. Just log in again.

"Not every network could be fully checked"?

Click **Check again** in a few minutes before you finish.

Can I do this on my phone?

It's easiest on a computer. Phone wallets (Trust Wallet, Rainbow) connect by scanning a QR code from the BlockBot page on your computer.

I already have MetaMask. Can I just add a new account?

No. Every account inside one MetaMask comes from the same recovery phrase. See Part 0.

Who do I contact?

Help is at `https://blockbot.com` only. Type it yourself. *We will never ask for your recovery phrase, and we will never contact you first.*
